

This video supports the following **Common Core State Standards for Mathematics**

<p><b>Grade 3: Operations and Algebraic Thinking</b></p>	<p><b>Represent and solve problems involving multiplication and division</b>          Interpret products of whole numbers, e.g., interpret <math>5 \times 7</math> as the total number of objects in 5 groups of 7 objects each. For example, describe a context in which a total number of objects can be expressed as <math>5 \times 7</math>.</p>
<p><b>Grade 3: Operations and Algebraic Thinking</b></p>	<p><b>Understand properties of multiplication and the relationship between multiplication and division</b>          Apply properties of operations as strategies to multiply and divide.<sup>2</sup> Examples: If <math>6 \times 4 = 24</math> is known, then <math>4 \times 6 = 24</math> is also known. (Commutative property of multiplication.) <math>3 \times 5 \times 2</math> can be found by <math>3 \times 5 = 15</math>, then <math>15 \times 2 = 30</math>, or by <math>5 \times 2 = 10</math>, then <math>3 \times 10 = 30</math>. (Associative property of multiplication.) Knowing that <math>8 \times 5 = 40</math> and <math>8 \times 2 = 16</math>, one can find <math>8 \times 7</math> as <math>8 \times (5 + 2) = (8 \times 5) + (8 \times 2) = 40 + 16 = 56</math>. (Distributive property.)</p>
<p><b>Grade 3: Operations and Algebraic Thinking</b></p>	<p><b>Multiply and divide within 100</b>          Fluently multiply and divide within 100, using strategies such as the relationship between multiplication and division (e.g., knowing that <math>8 \times 5 = 40</math>, one knows <math>40 \div 5 = 8</math>) or properties of operations. By the end of Grade 3, know from memory all products of two one-digit numbers.</p>
<p><b>Grade 3: Number and Operations in Base Ten</b></p>	<p><b>Use place value understanding and properties of operations to perform multi-digit arithmetic</b>          Multiply one-digit whole numbers by multiples of 10 in the range 10–90 (e.g., <math>9 \times 80</math>, <math>5 \times 60</math>) using strategies based on place value and properties of operations.</p>
